**UPDATE** 

DELETE

## 4 Design Steps:

Identify the resources

Create the URIs to access those resources

Assign the HTTP methods

Choose the data format

#### **PatientService**

+getPatient(id:String): Patient

+updatePatient(Patient:patient): Response

+addPatient(Patient:patient): Response

+deletePatients(id:String): Response

+getPrescription(id:String): Response

#### Patient -id: long -name:String +getId(): long +setId(id:long): void +getName(): String +setName(name:String): void Prescription -id: long -description:String +getId(): long +setId(id:long): void +getDescription(): String +setDescription(description:String): void +getMedicine(id:long): Medicine 1...\* Medicine -id: long -description:String +getld():long +setId(id:long): void +getDescription(): String +setDescription(description:String): void

## Creating URIs

Creating a Patient /patients

READING Patient /patients/{id}

Updating Patient / patients

Removing Patient /patients/{id}

# HTTP METHODS

GET

POST

PUT

DELETE

## **Data Format**

Read Request:

/patients/123

## Read Response:

```
<Patient>
    <id>123</id>
    <name>Bharath</name>
</Patient>
```

### Create:

```
<Patient>
<name>Bharath</name>
</Patient>
```

## Create Response:

```
<Patient>
<id>124</id>
<id>124</id>
<name>Bharath</name>
</Patient>
```

## Update Request:

```
<Patient>
    <id>124</id>
    <name>Bharath</name>
</Patient>
```

Update Response:

HTTP/1.1 200 OK

Delete Request:

/patients/123

Delete Response:

HTTP/1.1 200 OK
